**FOR IMMEDIATE RELEASE**

## **MRC Polymers Expands Product Offering with New Polypropylene Line**

**May 15<sup>th</sup>, 2014 – Romeoville, IL** - MRC Polymers, Romeoville, IL has developed and added a new line of unfilled polypropylene products to its already robust line of recycled compounds.

This new product line includes nine grades of recycled homopolymer and copolymer polypropylenes available in a variety of property ranges for impact, melt flow and stiffness. The majority of the product line comes in black, but limited quantities of colorable are available. The products can also be customer compounded to meet specific application needs.

In keeping with MRC's history, these products were developed using consistent, reliable feedstock from both post-consumer and post-industrial sources. These products are also third party certified for recycled content to assist customers in their sustainability efforts.

The new products continue to complement and expand the existing engineered and TPO offerings.

Please see the website, [www.mrcpolymers.com](http://www.mrcpolymers.com) for additional information and data sheets on this new line of unfilled, recycled polypropylene compounds.
